

2750 RXBDJ

Robustly built

OMMELIFT

New at JM Trykluft

The OMMELIFT 2750 RXBDJ fits a variety of customers and handles most tasks at height.

The rental company JM Trykluft has invested in two 2750 RXBDJ crawler lifts adding to their already large fleet of Ommelifts.

“We have always been satisfied with the good quality that Ommelift stands for” says Peter Madsen, Sales Director JM Trykluft.

He says that they are glad that the lift is produced in Denmark and that you know it has a long lifespan.

“It is important that the lift is cost efficient”

OMMELIFT 2750 RXBDJ has a working height of 27.5 m and a horizontal reach of up to 15.5 m. A zero-tail swing articulating riser give an exceptional 10.5 m up and over reach. The movable jib provides adjustment for the perfect work situation.

The stabilizers allow safe setup in the most difficult places. It is possible to place the lift on up to 35% slope, perfect for hilly terrain.

The crawler chassis is powerful and disperses the machine’s weight widely. This is important when maneuvering on more sensitive surfaces such as e.g. tiles or wooden floors.

“The controls are easy and straightforward for all our customers to use” says Peter.

The lift is a TRUE HYBRID: Engine power where heavy, constant performance is required and full battery capacity for indoor operation or in areas where air or noise pollution is prohibited or regulated.

“We wanted to expand our range of crawler lifts and since we are very satisfied with the trailer and crawler lifts, we have from Omme, it was an easy choice to make”

Peter Madsen, JM Trykluft

OMMELIFT since 2005

JM Trykluft have had Ommelifts in the fleet since 2005. They have a wide range of trailer and crawler lifts, distributed from their 9 depots around Jutland, Denmark.

2750 RXBDJ

- ✓ 27,5 m working height
- ✓ 15.5 m outreach
- ✓ True Hybrid
- ✓ Compact
- ✓ Simple, intuitive controls
- ✓ Grease-free telescopic booms of steel
